

Map Your Apiaries!

Help Pesticide Applicators Avoid Your Hives

FieldWatch® is a non-profit with a web-based mapping registry that promotes communication between pesticide applicators, beekeepers and crop producers in support of ongoing stewardship activities.

FieldWatch is a trusted source of crop and apiary data in North America promoting sustainability for pollinators, plants and people.

FieldWatch operates a registry dedicated to beekeepers called **BeeCheck™**.

FieldWatch offers free, accurate and secure online tools with an easy-to-use Google Maps™ interface.

Designed by Purdue University Agricultural and Biological Engineering Department with input and support from Purdue University's Cooperative Extension.

A Free and Voluntary Tool for Beekeepers

Map the locations of your hives in the BeeCheck online registry. Pesticide applicators consult this registry before spraying to improve decision-making and minimize damage from spray drift.

- ✓ Beehive placement can be done via GPS or manual "point 'n click" with mouse — no drawing required.
- ✓ Beehive sites are approved and validated by your state and/or province.
- ✓ You can add multiple hives in one submission.
- ✓ Time Stamp feature can be used to indicate active dates in a particular location.
- ✓ Posting on the public map is optional. Map and contact information can be limited to applicators registered with FieldWatch.
